

# INTRODUCTION TO THE TERMINAL WINDOW

BY : MICHAEL ILODIGWE

# WHAT IS A TERMINAL

- **What is a Terminal?**
- A terminal is a text-based interface used to interact with a computer's operating system.
- It allows users to execute commands to perform tasks, manage files, and run programs.
- **Why Use a Terminal?**
- Provides powerful control and flexibility over system operations.
- Efficient for tasks like file manipulation, software installation, and system administration.

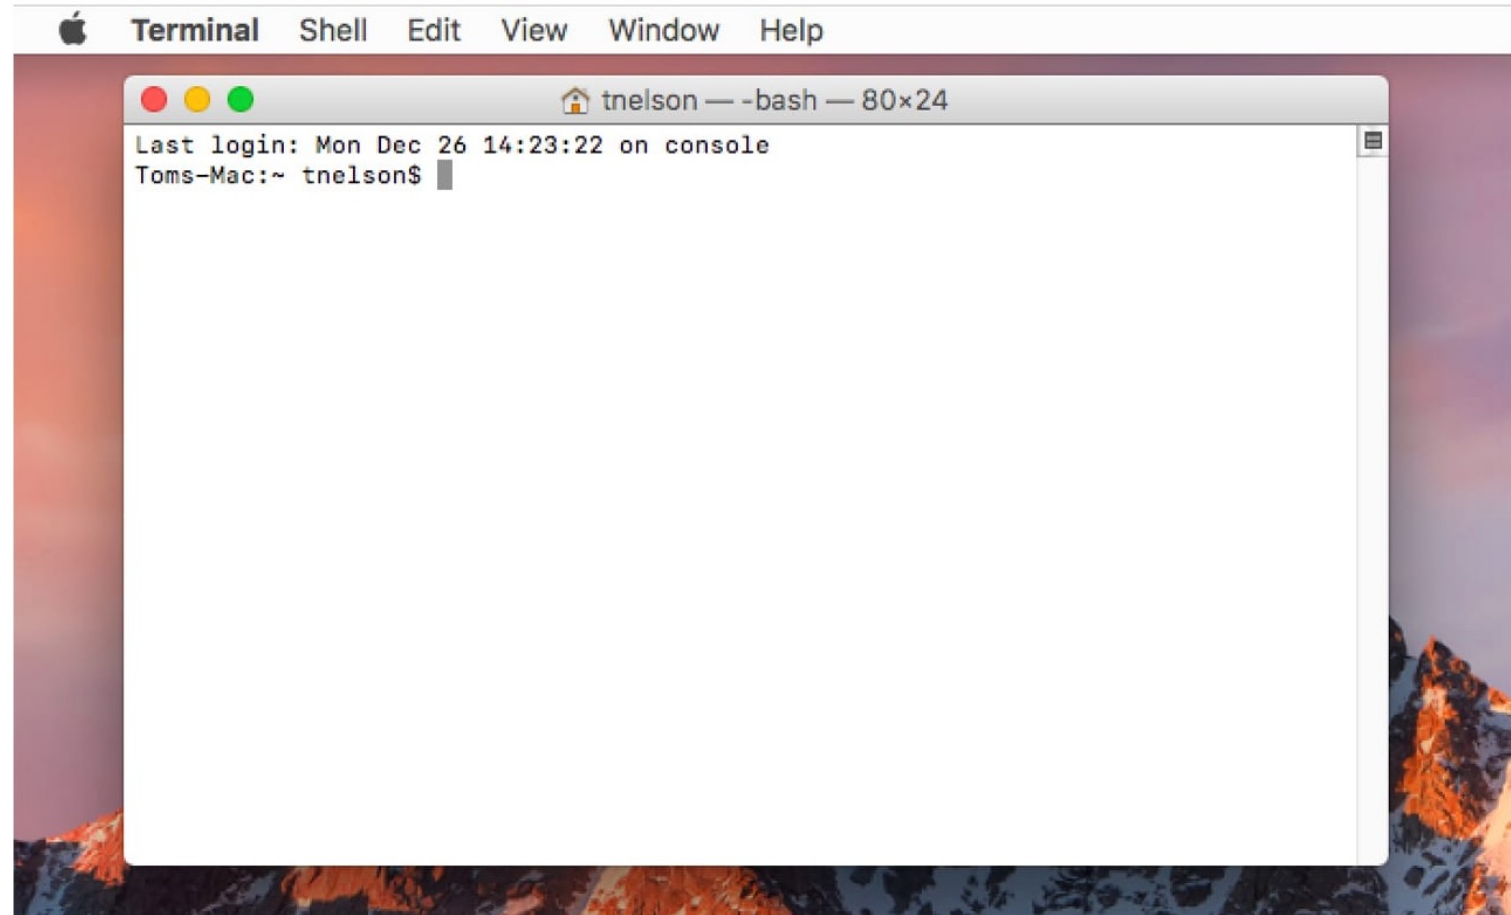

# LINUX TERMINAL

# HOW TO ACCESS TERMINAL WINDOW

- For Mac Users: Go to Finder -> Applications -> Utilities -> Click “Terminal”
- For Window Users:
  - **Using the Start Menu:**
  - Click on the **Start** menu (Windows icon) at the bottom-left corner of the screen.
  - Type "cmd" or "Command Prompt" into the search bar.
  - Click on the **Command Prompt** app that appears in the search results.
